liver

This image shows a posterior view of the human abdominal cavity. The liver is a large, reddish-brown organ located in the upper right quadrant. The stomach is a large, pinkish, sac-like organ situated below the liver. To the left of the stomach is the small intestine, which appears as a coiled, reddish-pink tube. To the right of the stomach is the spleen, a smaller, reddish-purple organ. A blue surgical drape is visible on the right side.

jejunum

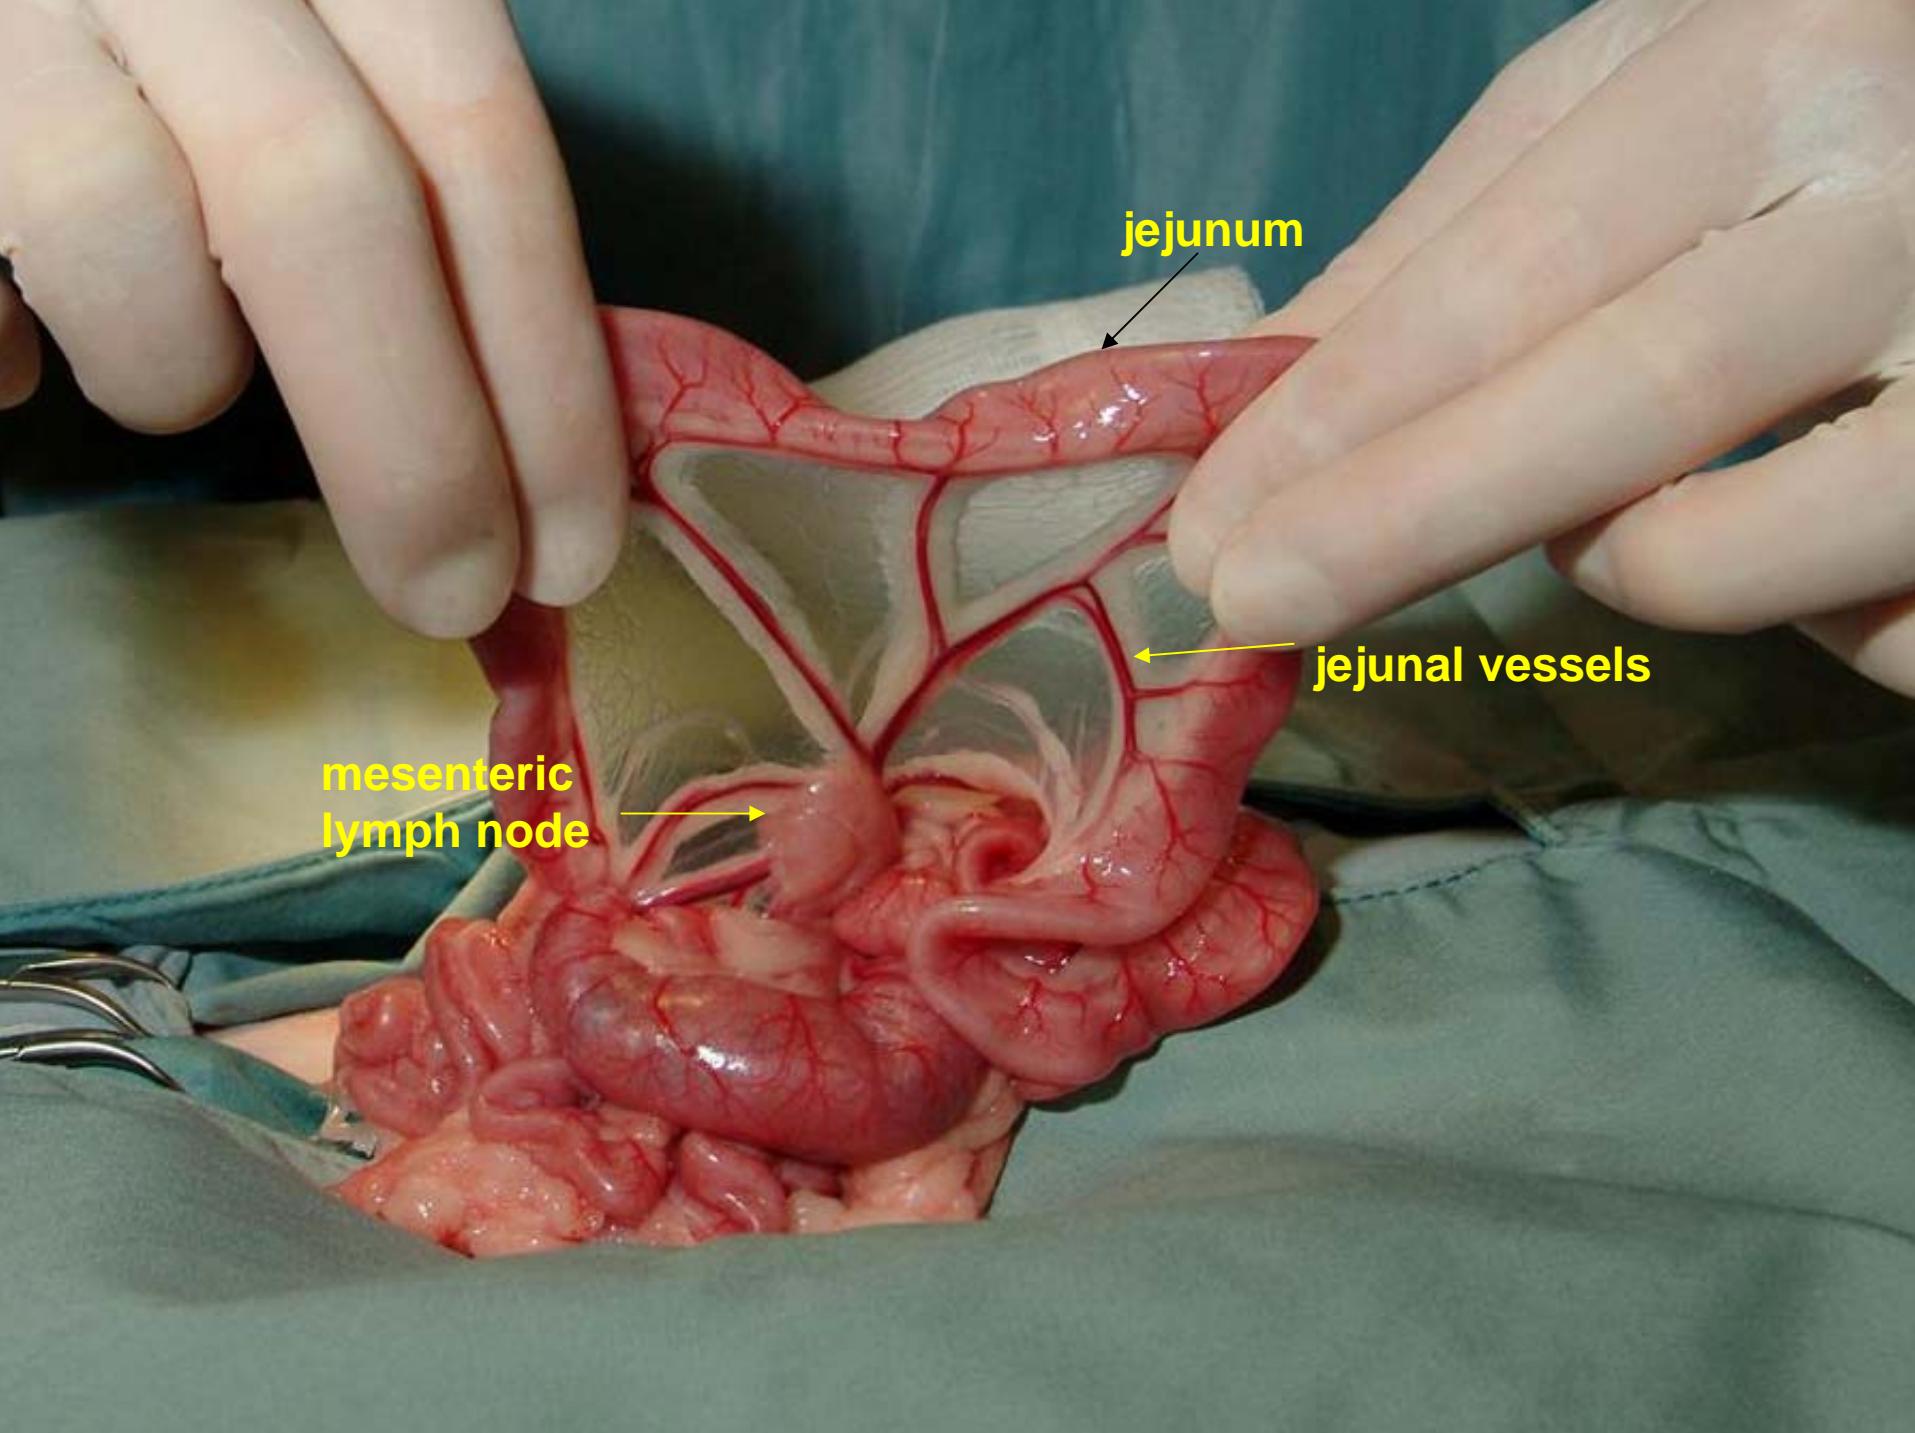

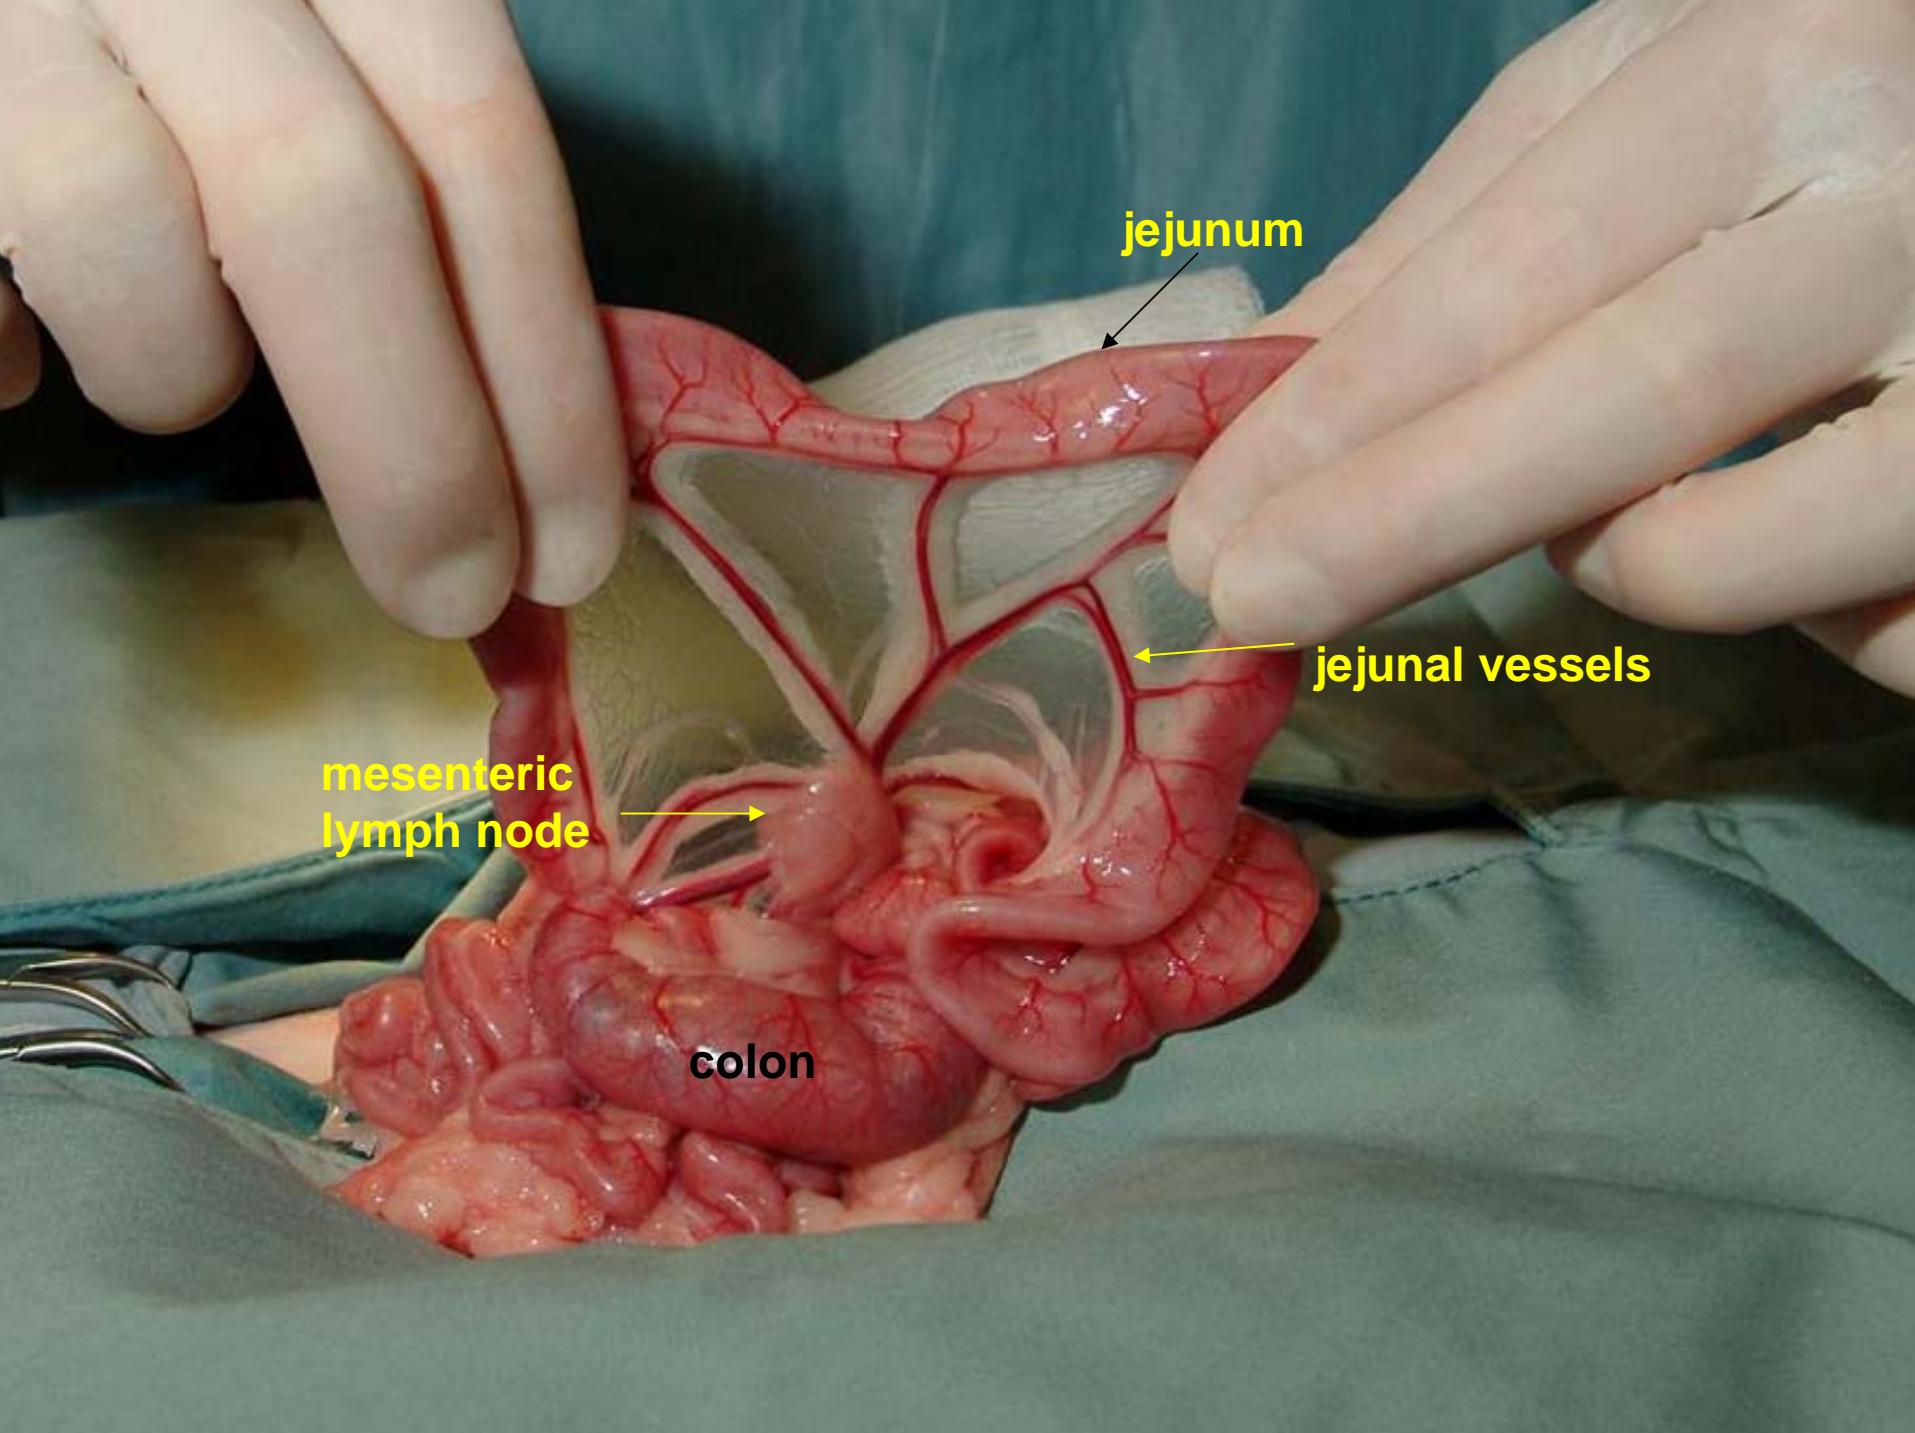

A photograph showing a surgical dissection of a segment of the small intestine. The hands of a surgeon, wearing blue gloves, are visible. One hand holds a white surgical sponge, while the other holds a pair of fine-tipped forceps. The tissue is pinkish-red with a distinct vascular pattern. An arrow points to the upper right portion of the tissue, labeled "jejunum".
